

PHILIPS

Patient monitoring

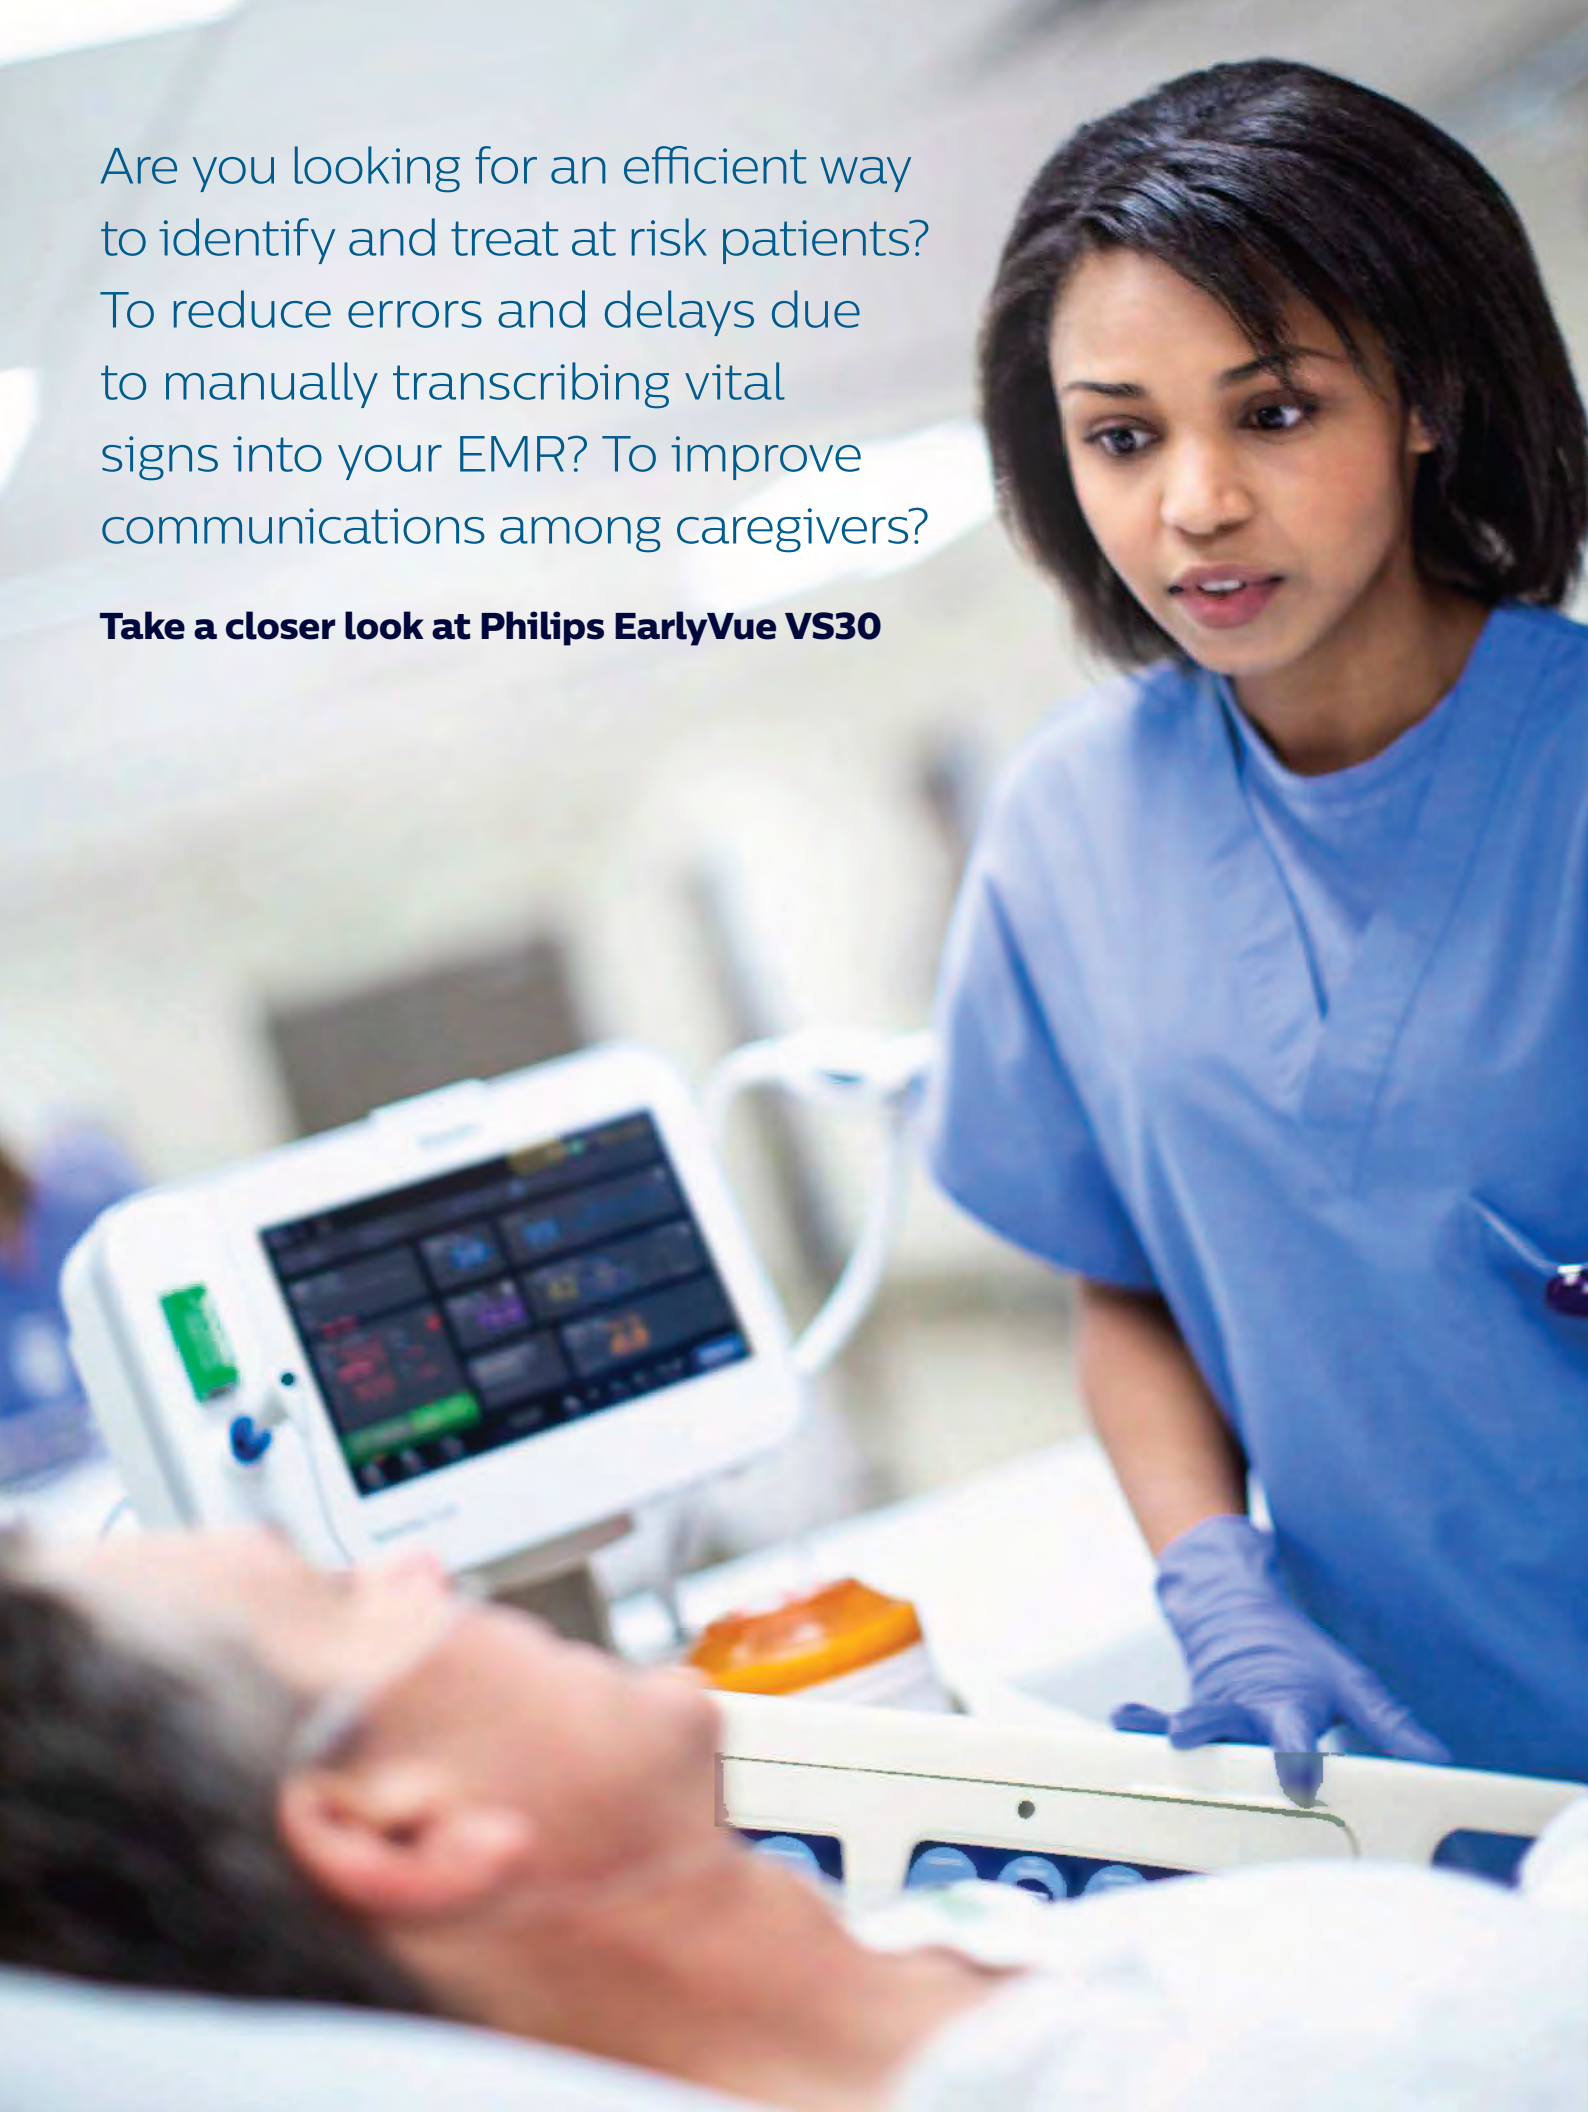

Early detection. Intelligent intervention.

Philips EarlyVue VS30
vital signs monitor

Are you looking for an efficient way to identify and treat at risk patients? To reduce errors and delays due to manually transcribing vital signs into your EMR? To improve communications among caregivers?

Take a closer look at Philips EarlyVue VS30

The sooner, the better

Philips EarlyVue VS30 is designed to change the way you think about vital signs monitoring. It unleashes the power of automated Early Warning Scoring (EWS) to help you quickly identify subtle signs of patient deterioration, so you can confidently and proactively deliver care.

Bring notifications to the bedside

- Display risk scores and recommendations with customizable EWS protocols
- Remotely access patient trends with monitor-to-monitor viewing

Put the flow in workflow

- Document full patient assessments with up to 35 customizable fields (QuickCapture)
- Automate EWS calculations to accelerate care (QuickAlerts)
- Simplify the data flow to and from your hospital systems (QuickCheck)

Accurately monitor vital signs and more

When patient conditions require closer attention, switch from spot check to automatic interval monitoring of blood pressure, SpO₂, pulse, CO₂ and respiration rate.

Includes Masimo rainbow SET™ options:

- SpO₂ with sensitivity settings
- Continuous respiration rate (RRa)
- Non-invasive total hemoglobin (SpHb)

Connect directly to the EMR

Auto-populate user ID and patient demographics with a license-free barcode scanner. Then stream your EarlyVue VS30 data directly to your EMR or HIS/PAS via HL-7.

Create efficiencies

You can customize your EarlyVue VS30 to drive efficiencies and protocol adherence and meet your clinical workflow needs.

View vitals remotely

With Philips monitor-to-monitor sharing, clinicians can easily pull up a patient's record from any networked EarlyVue VS30 monitor for greater visibility into patient vital sign trends.

Protect patient data

Our in-depth security approach unites Linux OS, secure Wi-Fi with FIPS 140-2 option and a variety of configuration choices to protect the privacy and security of your patients' data.

The monitoring investment that grows with you

The EarlyVue VS30 vital signs monitor scales on demand to keep pace with the changing demands of your hospital or practice.

Start with EarlyVue VS30 core vital sign measurements and from there, know you have an upgrade path – including Options such as:

- Capnography (E01)
- Masimo rainbow SET™ (M05)
- Continuous respiration rate (R01)
- Non-invasive total hemoglobin (R21)
- RFID barcode scanner for auto PID-data acquisition
- 802.11 internal wireless module (W01)
- FIPS 140-2 for extra wireless security (F01)
- Integrated print recorder for hard copies at POC (E05)
- Remotely view patient data trends on 15 monitors (M01)
- Advanced EWS capabilities (G01)

Ask your Philips representative about expanded mobile alerting and how Philips General Care solutions can help your caregivers dynamically prioritize patient care based on EWS risk assessments and practicing protocols.

Clinical education eases growing pains

Philips clinical and change management services can help streamline your hospital's general care workflow. Choose from a range of options designed to help you harness the full potential of your Early VS30 monitors to improve clinical workflow and enhance patient care.

Simplify your clinical workflow and keep a close watch over your patients, day or night, with the EarlyVue VS30 vital signs monitor.

Early detection. Intelligent intervention.
